PROTECT YOURSELF

Respirable Crystalline Silica

OSHA 29 CFR § 1926.1153

What is Silica?

Silica is comprised of quartz, found naturally in most rocks, sand, soil, brick, and concrete products. Crystalline silica exposure occurs when these methods are performed on silica building materials:

- Abrasion or Sandblasting
- Cutting or Sawing
- Crushing or Demolishing
- Drilling
- Grinding
- Jackhammering

Why Is It Important?

According to CAL/OSHA's Final Rule on Crystalline Silica published Sept. 23rd, 2017, construction firms must determine the amount of exposure to silica crystalline, create a written plan, provide proper training, medical surveillance, record-keeping and proper HEPA certified tools. Heavy fines can be imposed if non-compliant with 29CFR1926.1153.

What is required by OSHA?

- Employers must designate a competent person
- Establish and implement a written control plan that identifies tasks that involve exposure and methods used to protect workers.
- Train workers on work operations that result in silica exposure and ways to limit exposure
- Employee exposures must be below PEL of $50\mu\text{g}/\text{m}^3$, averaged over an 8-hour workday (TWA) and at an action level of $25\mu\text{g}/\text{m}^3$.
- Limit workers' access to areas above permissible exposure limit (PEL).
- Provide respirators when dust controls cannot limit exposures to the PEL
- Use housekeeping methods that do not create airborne dust, if feasible.
- Offer medical exams - including chest X-rays and lung function tests - every three years for workers exposed at or above the action level for 30 or more days per year.
- Keep records of exposure measurements, objective data, and medical exams.

DUST CAN BE DEADLY:

Silica exists in building materials including:

- Concrete
- Masonry
- Mortar
- Rock
- Sand
- Some Paints

IF YOU ARE **PERFORMING**:

- Abrasive or Sandblasting
- Cutting or Sawing
- Crushing or Demolishing
- Drilling
- Grinding
- Jackhammering

THE DUST AROUND YOU IS DANGEROUS.

When you are **BREATHING** dust that contains **SILICA**, the tiny particles can **DAMAGE** your lungs.

YOU CAN BE IN DANGER, EVEN IF YOU CAN'T SEE THE DUST.

Silica dust can also cause **LUNG CANCER, COPD**, enhanced risk of **TUBERCULOSIS** & other illnesses.
